

Reproduction of Overlapping Issues

This table demonstrates how text wrapping in a cell doesn't increase the row height, causing overlap with the next row.

Wrapped Text	Standard Text
This is a very long text that should definitely wrap into multiple lines. Since the current engine only calculates height based on font size, this should overlap the next row. It needs to wrap and push the next row down.	Cell 1.2
Cell 2.1 (Should be below the wrapped text)	Cell 2.2

Below is a div that might clump if vertical tracking isn't perfect.

This is a div.

This is another div that should be below the first one.
