

MiniPDFShowcaseDocument

This document demonstrates the core capabilities of the **MiniPDF** library, a lightweight and dependency-free PHP solution for PDF generation.

Text Styling & Layout

MiniPDF supports a variety of text formatting options:

- **Bold text** using `<b>` or `<strong>`
- *Italic text* using `<i>` or `<em>`
- Underlined text using `<u>`
- **Colored text** via inline CSS
- **Highlighted text** via `background-color`

Right-aligned text with italic style.

Table Support

Tables are rendered with automatic column width distribution and support for cell-level styling:

Feature	Support	Details
HTML5 Parsing	Yes	Uses PHPDOMDocument
CSS Styles	Yes	Inline styles supported
Word Wrapping	Yes	Handles long text within cells automatically
Dependencies	No	100% Pure PHP

Advanced Wrapping

Our line breaking engine ensures that even very long paragraphs are wrapped correctly according to the page margins. This is essential for generating readable reports and documents that contain substantial amounts of text content. It handles spaces correctly and ensures that words are not broken mid-way, providing a professional look to your generated PDF files.
